Passaggio aria

Ventola

Fuoriscita aria
depurata

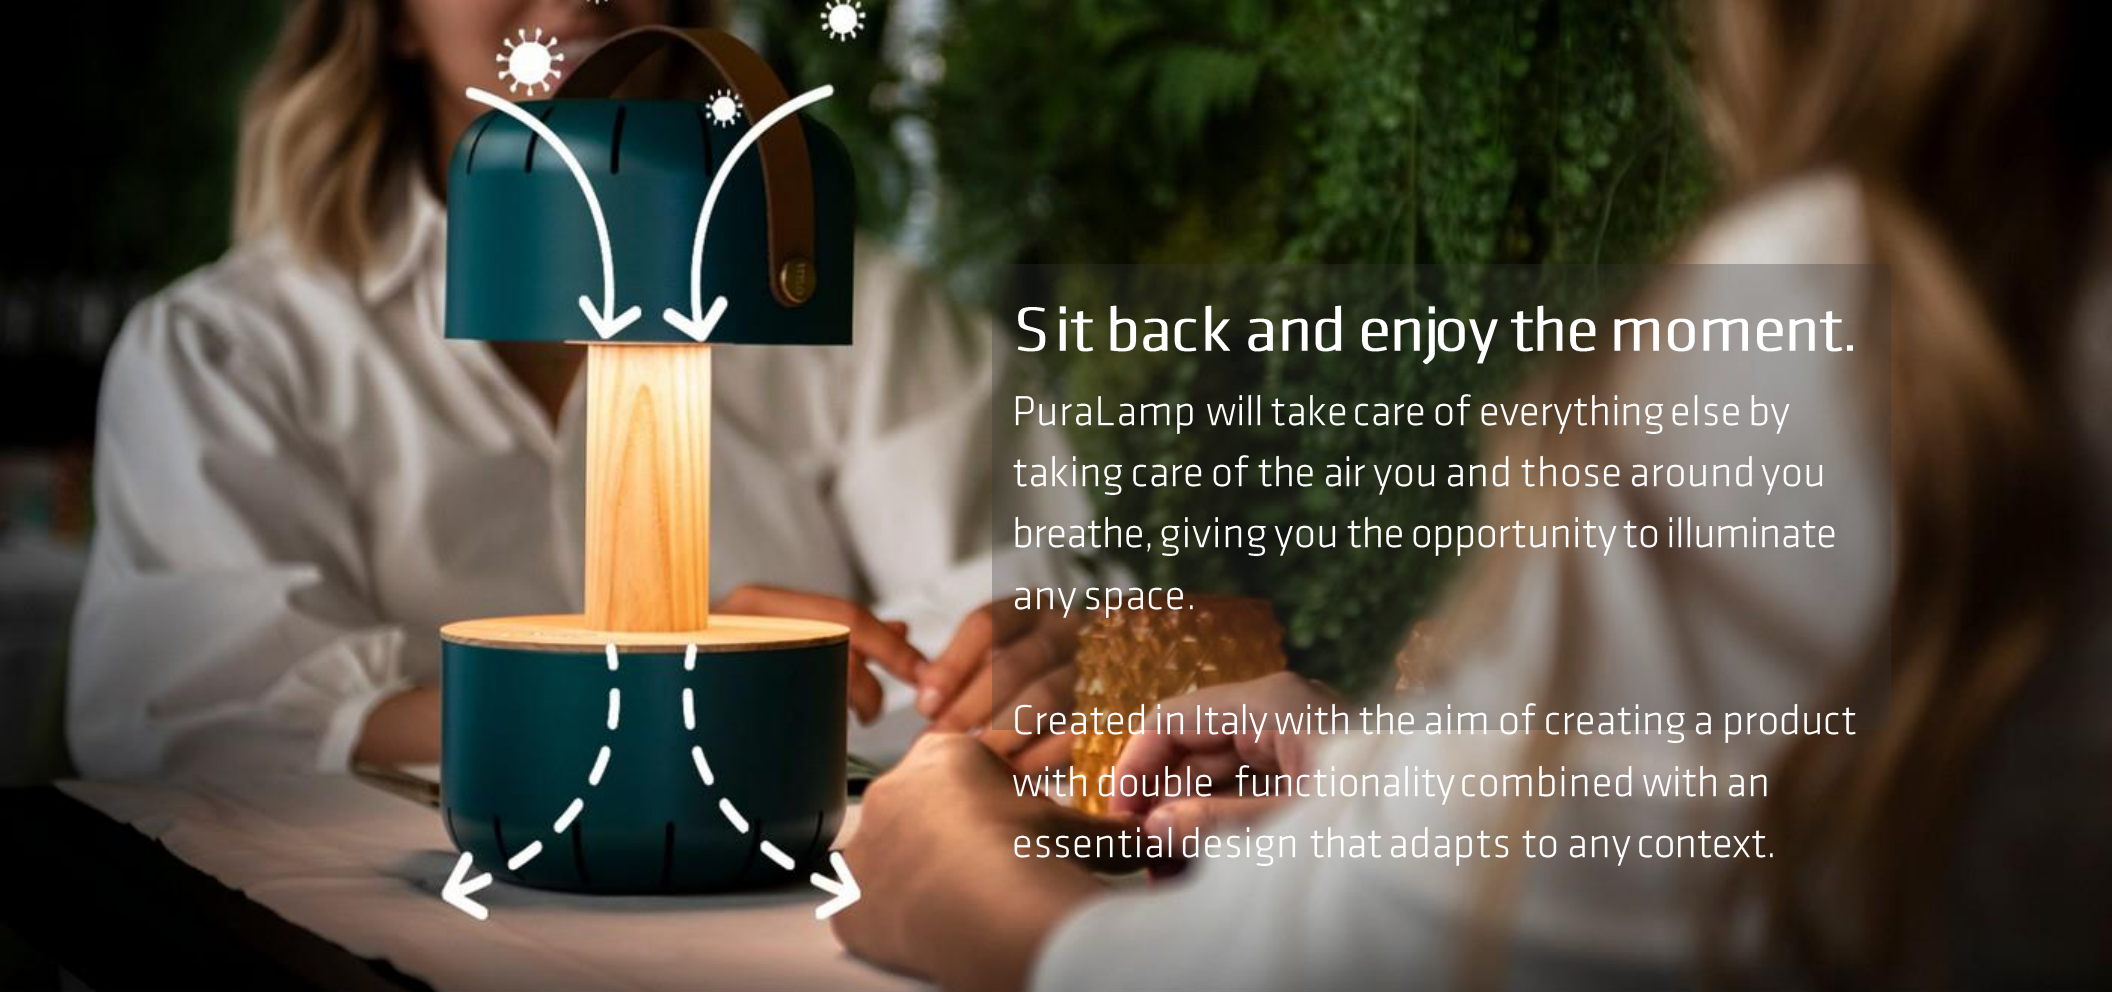

Just a touch

And Puralamp will begin to purify the air you breathe.

Inside this table lamp there is a HEPA H13 filter, treated with an antimicrobial solution developed in collaboration with the University of Ferrara. This proven system allows the device to eliminate 99.95% of bacteria, viruses and allergens, including SARS-CoV-2.*

*Tests showing that the treated filters are able to completely inhibit the growth of environmental microbial species when subjected to a continuous flow of ambient air for periods of 60 days.

Sit back and enjoy the moment.

PuraLamp will take care of everything else by taking care of the air you and those around you breathe, giving you the opportunity to illuminate any space.

Created in Italy with the aim of creating a product with double functionality combined with an essential design that adapts to any context.
